

DARK FIBER SOLUTIONS

HIGH-CAPACITY INFRASTRUCTURE FOR BUSINESS

As the demand for bandwidth-intensive applications and services grows, enterprises are forced to evaluate new transport technologies to enhance and maximize the value of their data communications infrastructure.

One of the most cost-effective ways to scale your bandwidth needs while preparing your business for the future is with an optical dark fiber solution.

WHY CHOOSE DARK FIBER?

Fiber optic cable can transmit voice and data traffic faster, further and is completely protocol independent. Today's fiber and conduit technology has an expected lifespan of more than 20 years. This ensures longevity, resiliency, unmatched flexibility and virtually limitless capacity.

BENEFITS OF DARK FIBER INCLUDE:

- **Scalability** – Virtually unlimited bandwidth potential at a fixed monthly cost. Today, institutions with substantial traffic and infrastructure needs are finding it more and more cost effective to own their own networks.
- **Flexibility** – Increased network uptime and the ability to select the best-of-breed equipment to support your communications requirements.
- **Security and Redundancy** – Have the security of a fully dedicated network infrastructure while retaining full control of your network and gaining the peace of mind that comes with a fixed cost network.
- **Simplicity** – There is no need to construct and manage your own physical network. Let Zayo design, build and cultivate an end-to-end fiber solution for your needs.

IT'S YOUR NETWORK:

Zayo designs solutions based on your needs and specifications using a variety of connectivity options. Creating custom dark fiber networks is one of the ways Zayo brings you the best communications network at industry-competitive prices.

Zayo's expertise as a network infrastructure provider for enterprise will benefit you in constructing your dedicated dark fiber solution. We want to help you build a network to meet your needs. Business Communications. Simplified.
