

Facilitate a worry-free digital and business transformation with Enhanced SD-WAN, a secure and fully managed solution for Edge-to-Core, Edge-to-Cloud, and Edge-to-Edge.

Ensuring the continued health of multi-office enterprises depends on the successful scaling of digital transformation, high performance mission critical systems, and highly available operational initiatives. Equally important are resiliency and reliability at each location and the sense of security that the applications you count on will perform consistently well. As requirements shift to edge-to-edge and edge-to-multi cloud, a comprehensive managed edge service becomes essential.

Zayo acquired QOS Networks, and with our combined skills, we now offer an Enhanced SD-WAN that leverages a proprietary Intelligent Network Platform, providing a hyper-flexible solution that brings your locations and equipment under a single, easily-managed edge umbrella.

Improve your business productivity with our Enhanced SD-WAN solution that provides the secure, software-defined intelligent network control, management, and AI enhanced dynamic insights and proactive fixes (AIOps) required in a highly dispersed, multi-cloud world.

WHAT WE ENABLE

Our fully managed edge solution enables our customers to quickly react to their ever changing business needs.

- Scales digital transformation
- Enables business agility
- Improves user experience with minimal effort
- De-risks change
- Improves employee productivity
- Reduces security risks
- Reduces network costs
- Increases network availability
- Ensures operational application effectiveness
- Enables data driven decisions
- Allows in-house IT to focus on core business
- Solves Cloud connectivity issues

PRODUCT BENEFITS

Simple to Deploy

- Zayo will provide dedicated onboarding resources to understand your network design, assets, and business intent.
- Zayo works with you to define application requirements and priorities, then uses automation to assist rapid deployment.
- No new circuit installation required – Enhanced SD-WAN can utilize your current network, saving day-one costs.
- Your network is integrated into a single seamless managed solution.

Simple to Manage

- Traffic is automatically prioritized based on application, source, and destination, ensuring optimal business and network performance.
- Extend to branch offices with managed WiFi.
- Enhance your security with embedded firewall capabilities or we can optimize our solution for seamless integration with a 3rd party managed security vendor.
- Ensure uninterrupted data flow with Zayo’s highly resilient core network, diverse access, and performance guarantee.

Simple to Scale

- Support multiple locations and users with bandwidth from 10M - 10Gbps.
- Easily connect new locations by adding an Enhanced SD-WAN appliance, preconfigured to meet your needs.
- Connect even your most remote sites – if it has connectivity, it can be integrated into your Enhanced SD-WAN.

A Fully Managed Edge Network You Can Rely On

- Our NOC, your single point of contact, monitors your complete solution for faster fault resolution.
- Holistic edge management of SD-WAN appliances, customer switches, routers and wireless access points giving you single vendor management responsibility, all seamlessly linked to your ITSM system for full visibility.
- AIOps powered advanced monitoring delivers proactive fixes and automates root cause analysis enabling high service availability and superior end user experience.
- Our intuitive portal reports on network, application and device performance for all sites.

A Foundational Underlying Network

- Zayo’s unmatched global fiber network for fast, predictable transport with SLAs.
- Connect your Enhanced SD-WAN to your SaaS services via CloudLink, Zayo’s low latency, high availability fiber access to major cloud data centers and SaaS providers.
- Connect to your customers and partners faster by linking your Enhanced SD-WAN to Zayo’s Dedicated Internet Access service and leverage our Tier-1 global IP transit capability.
- Leverage our ecosystem of fixed and wireless partners to solve all of your global networking challenges.
