Zayo®

— **Access the Edge**

Colocation

Offering the ideal customer experience means managing a data explosion. Extracting value from your data requires real-time analysis and processing - as close to your customers as possible.

Colocation is your key to the edge, because data centers are changing. They're getting smaller, more geographically distributed, and more diverse from major traffic thoroughfares.

Zayo is in a unique position to help you access the edge. Our massive fiber network allows you to process your most critical, lowest-latency applications from anywhere - no matter how remote. **We offer space and power options in distributed locations all along our fiber - optimal for low-latency compute, storage, and networking closer to your end users.** And we protect your network with multiple routes connecting your diverse data centers.

When you colocate your equipment with us, you'll optimize performance for

- Disaster recovery and network redundancy
- Cloud service connections
- Ground stations for satellite providers
- Last-mile wireless data offload and backhaul/fronthaul connectivity
- Network signal regeneration
- High bandwidth applications
- Low latency applications such as Artificial Intelligence (AI) and the Internet of Things (IoT)

Benefits of Zayo Colocation

Get Closer to your Customers

- Space and power at In-Line Amplification (ILA) sites along our fiber routes
- Strategically located Points of Presence (PoPs) for colocation & interconnects
- Customized space & power designs to meet unique requirements
- Rooftop and exterior wall mount space and power options
- Land lease options in rural areas for wireless, tower and cell providers

Fiber Connectivity Everywhere

- Extensive diverse fiber routing options within and between your markets
- Cloud provider access from over 380 cloud on ramps worldwide
- Fast cross connects to link you with other providers
- Access to the largest data center providers in the world

A Secure Environment for your Equipment

- 24/7/365 monitoring by Zayo Network Operations Center (NOC)
- N+1 redundancy for power and cooling
- Power backup through a generator and batteries
- Temperature control with multiple cooling units
- Layered physical security for entry
- Zayo escorted access for on-site visits
