

## INFRASTRUCTURE

### Fiber

Leverage the scalability, security and unlimited capacity of dark fiber, including options to customize a fully-managed Private Network solution.

### FTT

Deliver critical wide-range wireless coverage with highly customized tower backhaul solutions using dark fiber, wavelengths or ethernet transport.

### Small Cell

Enhance network coverage and capacity where bandwidth consumption is most demanding, while leveraging Zayo's wide-ranging partnerships to strategically place equipment for optimal coverage.

## NETWORKING

### Wavelengths

Run bandwidth-intensive applications and transmit massive amounts of data on a high-capacity network with predictable latency and high reliability.

### Enhanced SD-WAN

A white glove design and install process and fully managed edge-to-anywhere service that enables customers to have end-to-end application service levels and prioritization – all supported by AIOps monitoring for automated fixes, higher network availability and actionable insights.

### Ethernet

Transport workloads and data-in-motion securely and reliably with a dynamic solution that routes traffic to the lowest latency path available.

### WAN

A global enterprise virtual private network built on high availability MPLS with all the benefits and security of a private network – without the cost of design and operation.

## INTERNET & SECURITY

### Internet (DIA & IP Transit)

Access a dedicated, reliable and fast connection to the Internet on a Tier-1 network with deep peering relationships. Improve performance and run mission-critical business functions with a dedicated, reliable, and fast internet connection on a Tier-1 network across Zayo's owned fiber backbone.

- DIA features static routing and single-site access to the Internet.
- IP Transit features Border Gateway Protocol (BGP) providing multi-homed customers access to full route tables and robust peering relationships.

### DDoS Protection

Stop DDoS attacks at the network perimeter by diverting only malicious traffic to global scrubbing centers, leaving clean traffic unaffected by added latency.

### Firewall

Gain control and visibility into your network's traffic to mitigate sophisticated cyber threats with Network Firewall as a Service.

## NETWORK SOLUTIONS

### Private Networks

Discover all the performance benefits of Zayo's expansive dark fiber network – without the overhead and complexity of managing and maintaining your IT infrastructure.

### CloudLink

Connect to the Cloud while cost-effectively increasing performance and scale and reducing exposure to 3rd party interception and malicious disruption.

### Ultra Low Latency

Designed for when speed matters most, Zayo offers Ultra Low Latency network connections that are optimized for industry leading latency and uptime performance.
