# Shield Your Campus: Stop DDoS Attacks Before They Disrupt Learning

Zayo offers an in-line, network-based **DDoS Protection** service tailored to safeguard educational networks from disruptive DDoS attacks. With schools increasingly reliant on the Internet to power digital learning and administration tools, our solution ensures continuous network availability, minimal downtime, and protecting critical educational resources - all without impacting latency.

DDoS Protection with AIF

You are now protected with an additional buffer between you and the attacker.

How Zayo's DDoS Protection Works for Your Institution

Zayo's DDoS Protection service analyzes your school's normal traffic patterns and detects deviations caused by attacks. Once detected, malicious traffic is diverted to scrubbing centers, ensuring that only legitimate traffic reaches your network. Reinforced by insights into global Internet traffic, potential attacks can be thwarted before they even take place. Operate with ease, knowing your school's connectivity is secured against disruptions to online learning platforms and administrative systems.

Make DDoS Attacks a Thing Of The Past

With Zayo's proactive DDoS protection service, your network will no longer be at risk from unpredictable, chaotic, and costly DDoS attacks. Our service protects both on-campus and remote learning environments, enabling educators to focus on delivering quality education without worrying about network disruptions.

Key Benefits for Schools

- **Always-On Protection:** Zayo's DDoS service runs continuously, identifying and mitigating attacks before they cause downtime, ensuring a reliable learning experience.

- **Customizable Solutions:** Schools can choose the DDoS protection plan that best fits their size and needs, with no added latency for unaffected traffic.

- **Expert Support:** With Zayo's 24/7 Security Operations Center, schools have access to industry-leading support to resolve security issues swiftly.

Features Designed for Education

- **Comprehensive Coverage:** Protect all of your school's IP services under one subscription with proactive and real-time mitigation.

- **No Hardware Requirements:** No need for additional hardware installations, simplifying the setup and reducing costs.

- **Multi-Layered Security:** Our solution combines BGP Flowspec and TMS traffic scrubbing for enhanced protection, cutting downtime from hours to seconds.

Related Services

In addition to DDoS protection, Zayo offers complementary cybersecurity solutions, including:

- **Content Filtering:** Ensure safe browsing for students and staff with cloud-based content filtering tools.

- **Unified Threat Management:** Detect and respond to emerging threats with advanced security architecture.

- **Virtual Private Network (VPN):** Secure remote access for students and faculty, integrated with Zayo's DDoS Protection for enhanced safety.
