

A History of Connection

We are connectors.

Our founders were part of the backbone of the internet

They understood that truly putting “the world” on the World Wide Web would require connections — lots of them.

Zayo launched

In 2007 they formed Zayo with a vision of accumulating, connecting and optimizing an unparalleled global network of networks to serve carriers, enterprise and government customers.

We connected the dots.

Foreseeing the future of data

We knew that data capture and processing technologies would evolve rapidly and demand for data transmission would multiply exponentially along with it.

Connecting and extending network solutions

We connected great people to create networking solutions for customers, extending their network reach as their businesses evolved.

We connect everywhere.

Zayo is always expanding

Zayo is the leading independent provider of light-speed data transmission infrastructure, with dense, high-quality networks connecting every major market in North America.

Providing the best for our partners

Through partnerships we provide our customers with global reach that takes them nearly anywhere they need to be.

Now, we're connecting you.

Scale to match any enterprise

Zayo was built to serve the largest and most innovative companies in the world. Our industry-leading product portfolio is always growing.

With bespoke service offerings

Now we're expanding our market to bring our portfolio of world-class connectivity solutions to businesses like yours:

- Network Connectivity
- Security
- Voice and Collaboration
- Managed Edge

Connect with us

Zayo continues to build out its global fiber network with unmatched capacity and reliability. Our solutions are designed to meet you where you are today — and connect what's next for your business.
