# Your All-inclusive Communications Network

Build a business communications network with Zayo's SIP Trunking

**SIP (Session Initiation Protocol) brings the promise of VoIP to life. With a simple Internet connection, you can run all of your calling - inbound and outbound, local, long distance, international, toll free, and 911 - all as simple applications on your data network.**

Consolidate your voice and data network securely and efficiently into a single advanced IP network. SIP provides connectivity from your on-premises or cloud-based system to the Public Switched Telephone Network (PSTN).

## Zayo - Your Networking Powerhouse

**2M** Telephone Numbers  
(DIDs) deployed today

**700K** Simultaneous  
SIP Sessions

**16M** Owned miles  
of fiber

The Zayo Network | **Connecting What's Next**

## The Many Benefits of Zayo SIP

### Flexible and Scalable Calling

SIP allows you to quickly provision new locations and easily add communication capacity. Move into new markets, support your hybrid workforce, use your local numbers, and offer a ubiquitous, harmonized experience to your staff without expensive equipment.

### Simple to Install and Manage

Zayo's project managers will lead the installation every step of the way. Once installed, we offer exceptional, personalized customer care from experienced technicians. Our customer portal provides full administrative control of service options, reroutes, billing and all other features.

### A Great Value

A single connection for both voice and data means more efficient functionality and a lower cost. Traditional phone systems require costly hardware. Zayo SIP doesn't.

### Consistent, Reliable Performance

Remember - Zayo owns the underlying network, which means that we control the performance of the services running over it. We provide robust network connectivity with built-in geo-redundancy for high availability, 99.999% uptime, and multiple options for disaster recovery to ensure business continuity.

### Secured Networking

Your network access from Zayo is completely dedicated to your company. And if you'd like to use your existing network access from another provider, Zayo can provide encrypted SIP service to ensure the privacy and security of your communications. We use TLS (transport layer security) and SRTP (secure real-time transport protocol) to protect your traffic.

## The Full Suite

Zayo provides a powerful combination of product offerings spanning fiber connectivity, managed services and cloud-based communications solutions.

### Voice & Collaboration

Unified Communications (UCaaS)

SIP Trunking

### Managed Edge & Security

SD-WAN

Edge Networking

SASE & Security
